EDUCATION

Université de Paris Sud XI, Orsay, FRANCE — October 2013 – October 2016
Commissariat à l'Énergie Atomique, Saclay, FRANCE
Ph.D. in Nuclear Energy

Texas A&M University, College Station, TX, USA — August 2011 – August 2013
M.S. Nuclear Engineering
GPR: 3.900/4.0

Texas A&M University, College Station, TX, USA — August 2007 – May 2011
B.S. Nuclear Engineering
GPR: 3.547/4.0

TECHNICAL SKILLS

- Programming Languages: C++, MATLAB, FORTRAN, PERL, PYTHON
- Support Programs: CMake, Docker, Git, Qt
- Modeling: Nuclear Reactor Transients, 2D Fluid Flows, Uncertainty Analysis
- Document Processing: LaTeX, Microsoft Word & Excel
- Nuclear Codes: APOLLO3, SCALE, MCNP, CASL, MOOSE
- Nuclear Experimentation: Neutron Activation Analysis, Gamma Spectroscopy, Instrument Calibration, Reactor Operation, Radioactive Material Packaging, Robotic Arm Manipulation, Environmental Surveying

WORK HISTORY

Postdoctoral Research Associate — June 2017 – Present
Oak Ridge National Laboratory
Reactor Physics Group
Description: Working on the NEAMS Workbench to facilitate coupled physics simulations. Serving on the SCALE infrastructure team to bring engineering solutions to support developers.

Ph.D. Research Associate — October 2013 – October 2016
Commissariat à l'Énergie Atomique (CEA), Saclay, FRANCE
DEN/DM2S/SERMA/LTSD
Description: To build a multiphysics framework within the APOLLO3 software package. The framework will use matrix-free methods and will support coupling between neutron transport and thermal hydraulics. Special attention was devoted to the treatment of homogenized cross sections in transient simulations.

Graduate Research Assistant — August 2011 – August 2013
Texas A&M University, College Station, TX, USA
Department of Nuclear Engineering
Description: To build a high fidelity model of coupled physics important to reactor analysis. The proposed method uses the mesh adaptive finite element method which can utilize the Deal.II FEM library written in C++. The physics modeled are two-group transient neutron diffusion and non-linear heat conduction.

Summer Internship — May 2012 – August 2012
Oak Ridge National Lab, Oak Ridge, TN, USA
Reactor and Nuclear Systems Division
Description: Built a tool for the SCALE suite that evaluates how manufacturing tolerances impact the behavior of k-eff. This tool also handles the situation where parameters within a model are correlated and when possible correlations exist between different models. The tool was later incorporated in the SCALE 6.2 release.

Reactor Operator/ Health Physicist May 2009 – May 2011
Nuclear Science Center, College Station, TX, USA
Description: A reactor operator ensures the safe operation of the reactor facility, and also performs necessary maintenance on the reactor (1MW TRIGA). A health physicist performs environmental surveys on the facility and conducts analysis experiments using the available reactor.
